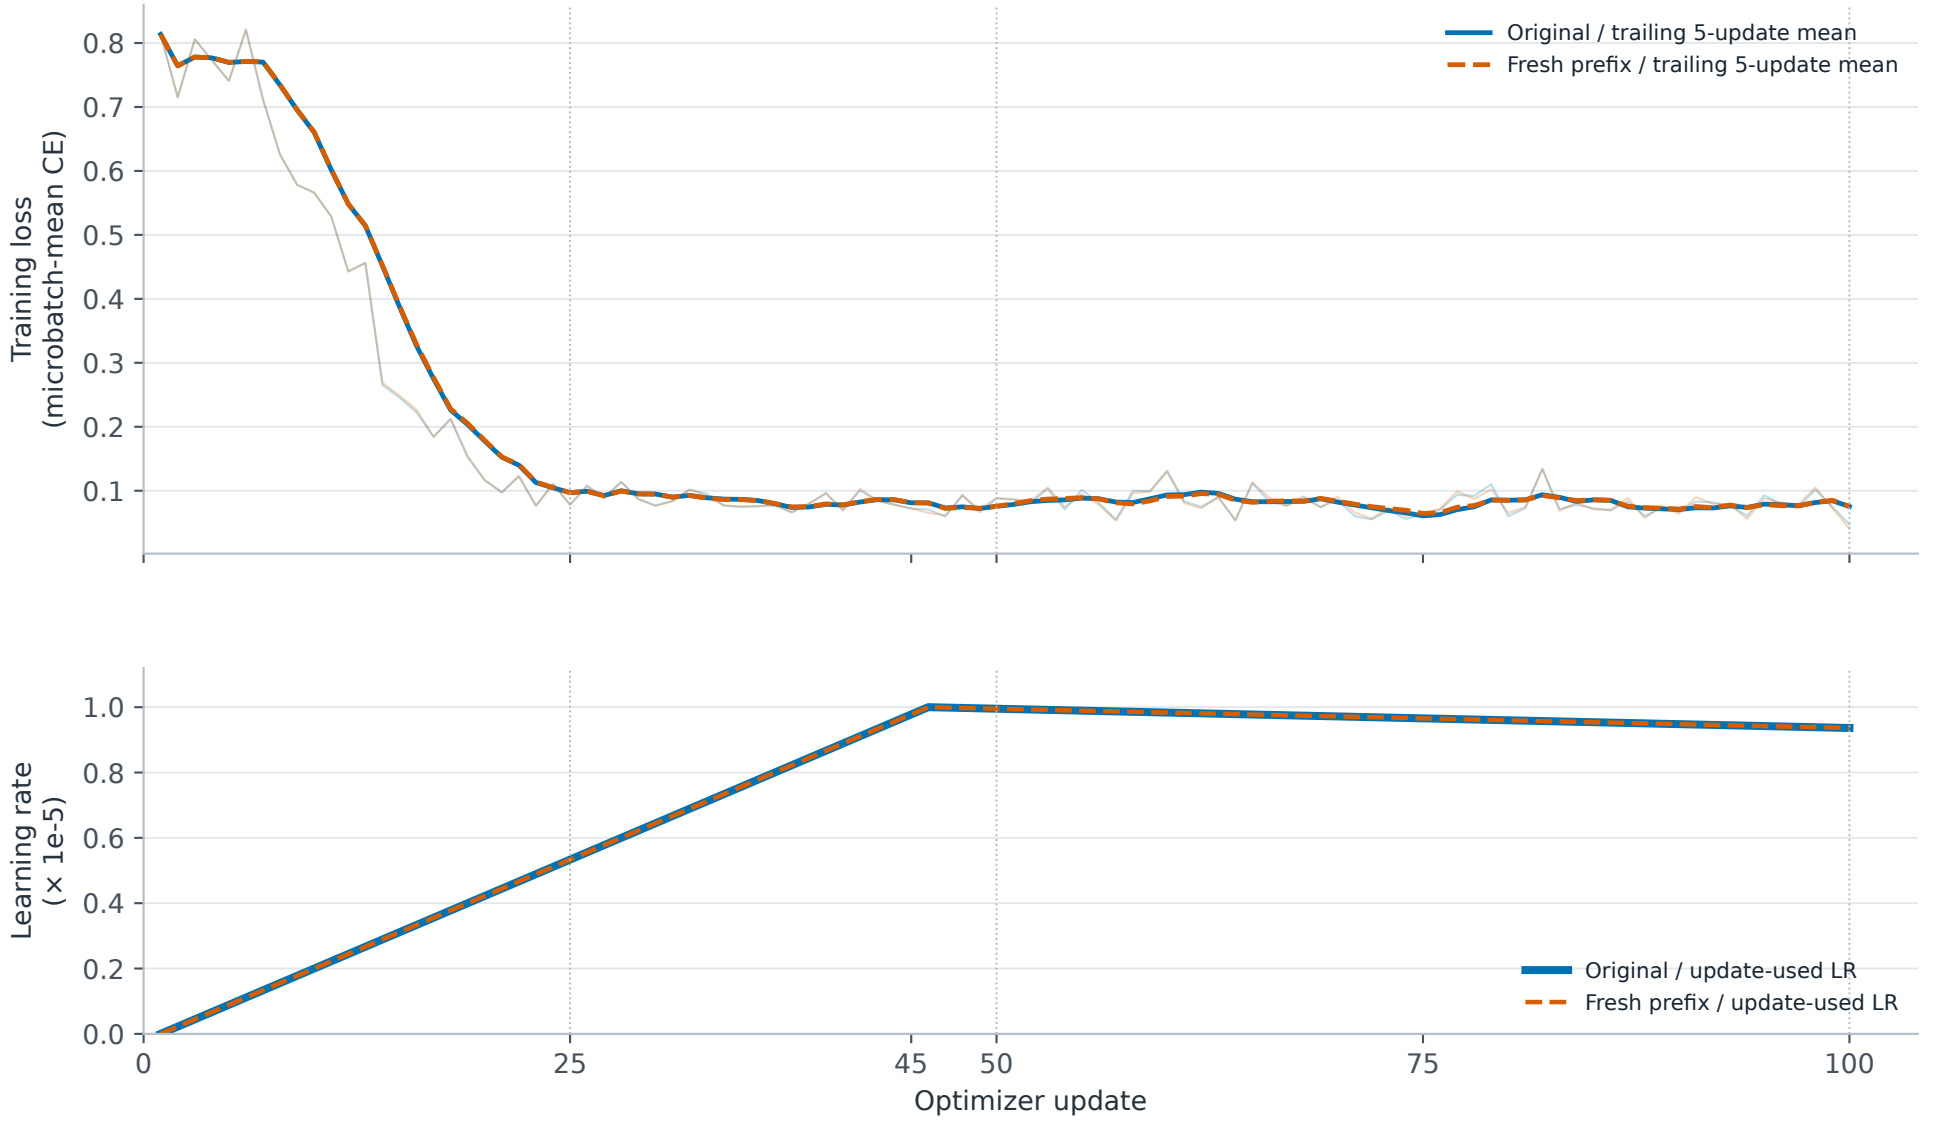
First 100 updates: original and fresh prefix runs

Full scheduler: 892 updates; warmup: 45 updates; observation stops at 100

PARTIAL DIAGNOSTIC — campaign failed on full-clean truncation; full-other not run



Observed prefix only. The scheduler was not rebuilt with max_steps=100: LR remains nonzero at update 100.
Warmup has 45 scheduler steps; the update-used LR first reaches its peak at update 46. Pale lines are raw losses; dark lines are trailing means.
Matched configuration and aggregate data counts do not prove the original per-ID order or bitwise CUDA replay.
