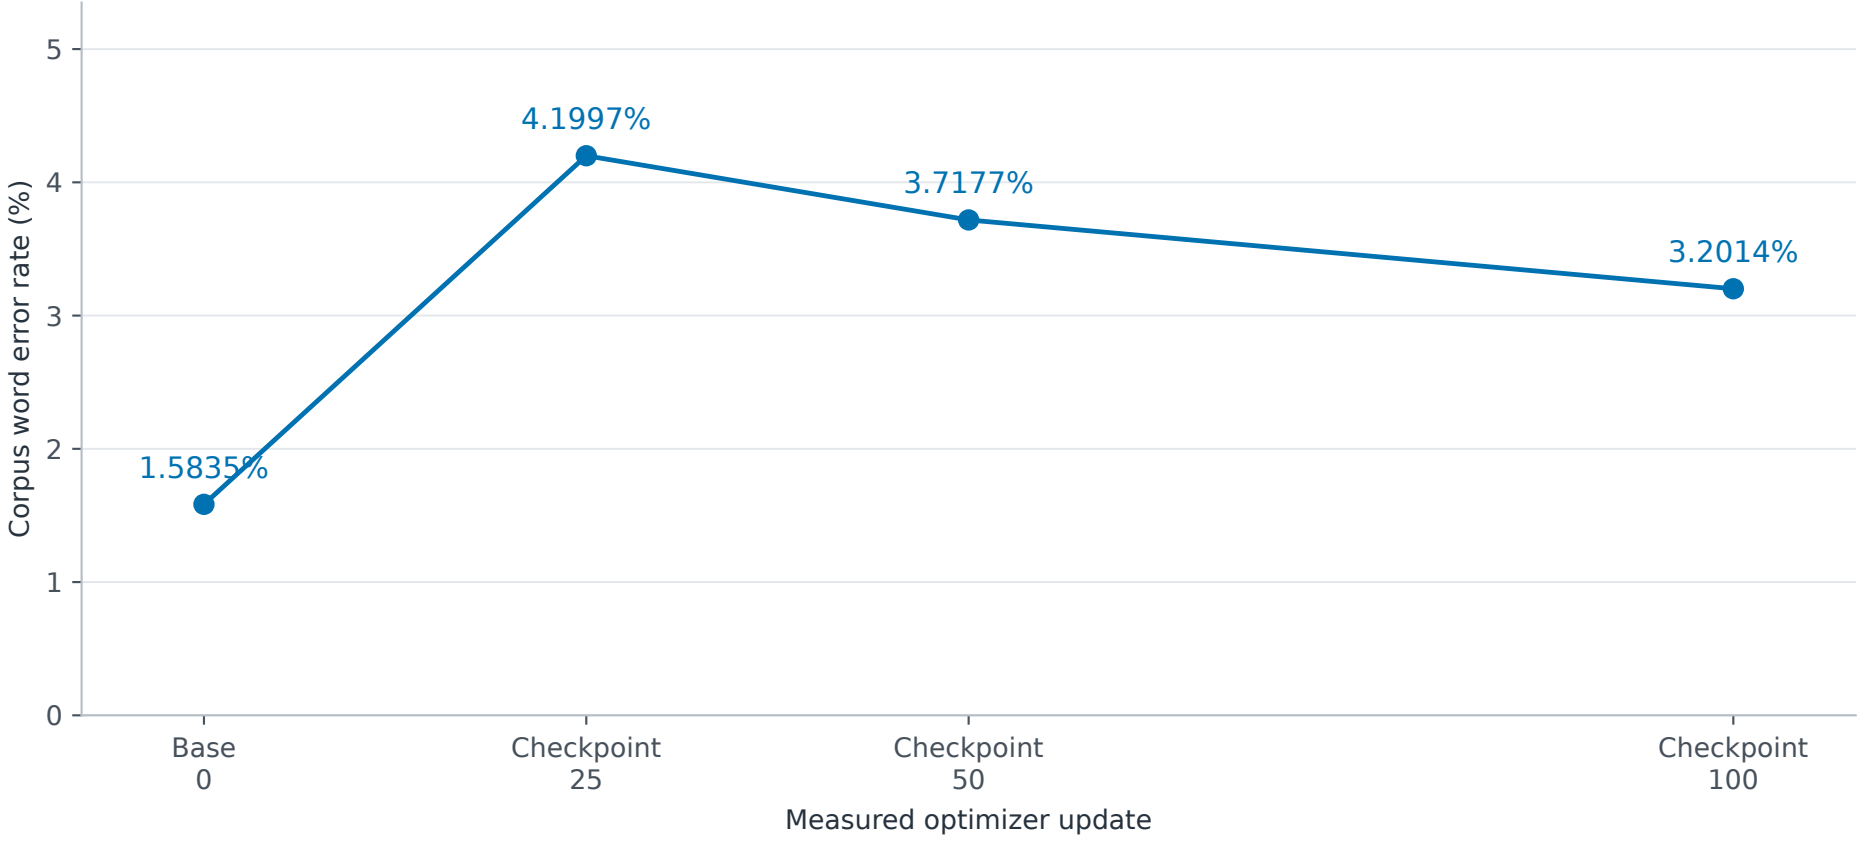
Fixed128 generation WER: measured early checkpoints

Same 128 utterances / 2,905 reference words; exploratory development diagnosis

PARTIAL DIAGNOSTIC — campaign failed on full-clean truncation; full-other not run



Only base / 25 / 50 / 100 generation results are measured here; lines are visual guides, not a continuous WER trajectory.
Fixed128 is a development subset, not full dev-clean or independent test. Same IDs/normalizer, greedy, batch 16, budget 512; zero truncation.
Repeated development inspection is exploratory; this chart neither selects a winning checkpoint nor establishes the cause of any change.
